

Pull past the road you intend reversing into. **Stop when you can see the rounded part of the kerb in your top mirror.** Your position should be about $\frac{1}{2}$ meter from the kerb with the steering straight.

Apply the parking brake and select reverse gear. Prepare to move and **carry out 360* observations.**

You will have a view similar to this as you reverse back towards the corner **at Zimmer frame** speed.

Main observations should be to the rear with occasional checks to the front of the vehicle looking for any type of risk. As you reverse back the kerb will disappear from the rear window.

Stop when the small red dot on the little side window rests on the edge of the kerb. Apply the parking brake and prepare to move and **again carry out 360* observations.**

Once it is safe move at Zimmer frame speed and turn the steering **1 full turn to the left quickly.**

Again **carry out 360* observations** looking for any risks.

Glancing in the passenger door mirror at regular intervals, **take $\frac{1}{2}$ turn of steering to the right** when you have a view similar to the photograph ($\frac{1}{2}$ meter from the kerb).

Very quickly **carry out 360* observations** again looking for risks

Again glance in the passenger door mirror.

If the **gap narrows any more quickly take another $\frac{1}{4}$ turn to the right.**

Again carry out 360* observations looking for risk.

Glancing in the passenger door mirror at regular intervals, wait until the gap starts to widen and quickly apply ½ a turn of steering to the left.

Again carry out 360* observations looking for risks.

Continue to move at Zimmer speed.

Allow the kerb to drift about ½ way across the rear window and straighten the steering to the right quickly.

Again carry out 360* observations looking for risks.

Keeping moving until told to stop.

Keep glancing in the side mirror to maintain a gap of around ½ meter

Points to remember,

- This is a **slow speed exercise**; keep your speed **to Zimmer frame speed only**.
- Stop if another **vehicle is within 10 meters** of your vehicle.
- Stop if a **pedestrian is within 5 meters** of your vehicle.
- **Main observations are to the rear** of the vehicle with occasional check all around.
- Always remember that **children and elderly people are venerable** and may require extra considerations.
- If you think you are going to strike the kerb **STOP** and shunt forward.
